Plumbing Concept Design: Visualizing Customer Data Flow

Explore how customer data flows through Iris Security Architectures using an intuitive plumbing metaphor. This presentation visualizes the four distinct integration pathways that enable secure, managed, and targeted data delivery.

Overview of the Customer Data Flow

Customer Entry Point

Customer data enters through the main intake pipe and is intelligently routed through three distinct valves to different management scenarios.

Flow Control

The Diverter: Four Integration Branches

Iris Interface Options for Routing Data

The main supply pipe diverts into four distinct integration branches, each representing a unique Iris interface option for routing customer data. These pathways offer flexibility from granular API control to fully managed portal solutions.

API

API Integration

Teal valves providing granular control over data endpoints.

SDK

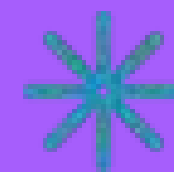

SDK Integration

Indigo tool-kit junction boxes for developer integration.

Portal

OnWatch® Portal

Polished navy enclosed pipe for fully managed secure flow.

Micro-Experience

Streamlined teal pipe for targeted microservice delivery.

Management Comparison Chart

API Integration

High

- ☒ Control Level: Granular
- ☐ Implementation: Moderate
- ☐ Security: Configurable
- ☐ Management: Self-service
- ☐ Complexity: Medium-High
- ☐ Best for: Custom builds

OnWatch® Portal

Premium

- ☒ Control Level: Managed
- ☒ Implementation: Fast
- ☒ Security: Maximum
- ☒ Management: Fully managed
- ☒ Complexity: Low
- ☒ Best for: Enterprise

SDK Integration

Flexible

- ☒ Control Level: Moderate
- ☒ Implementation: Quick
- ☒ Security: Built-in
- ☒ Management: Hybrid
- ☐ Complexity: Medium
- ☐ Best for: Developers
