

# DATA FLOW SECURITY GUIDE

## SaaS Identity Protection Through Smart Security Architecture

### API Integration Branch Granular Control Valves

Customer data flows through secure API pipelines with precision control. Teal valves regulate data access at every checkpoint for maximum security.

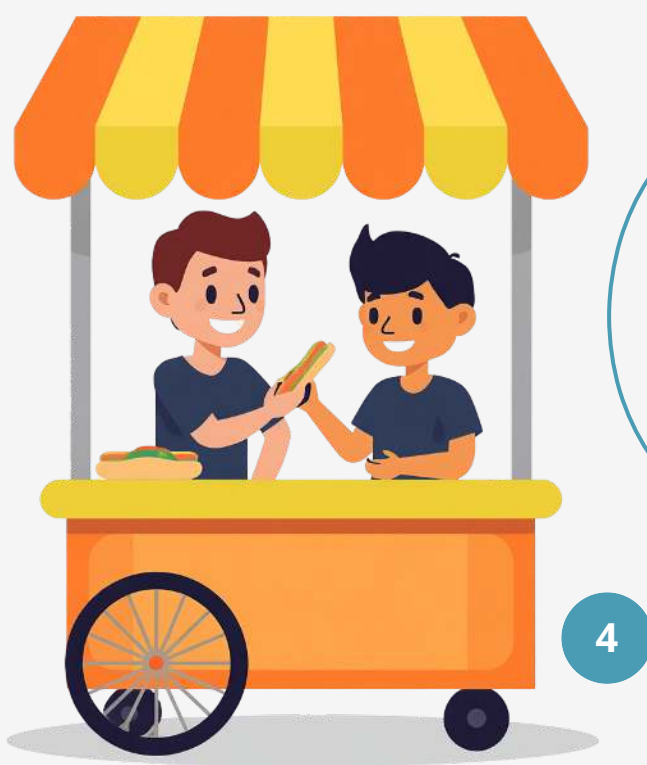

### SDK Integration Branch Tool-Kit Junction Boxes

Data routes through developer-friendly SDK pipelines with built-in security tools. Indigo junction boxes provide seamless integration and identity verification.

### OnWatch® Portal Branch

#### Fully Managed Flow

Enterprise data flows through managed navy pipelines with complete oversight. Dedicated monitoring ensures continuous identity protection and compliance.

### Micro-Experience Branch

#### Streamlined Targeted Delivery

Lightweight data streams flow through optimized micro-pipes. Orange valves enable targeted identity checks for fast, focused experiences.

### The Management Chart Control vs. Speed Comparison

API offers maximum control, SDK balances both, Micro-Experience prioritizes speed, OnWatch® provides full management.
